### Things That Make Loud/Soft Sounds Loud Sounds

The decibel level of a sound having the threshold intensity of  $10^{-12} \text{ W/m}^2$  is  $\beta = 0 \text{ dB}$ , because  $\log_{10} 1 = 0$ . That is, the threshold of hearing is 0 decibels. Table 1 gives levels in decibels and intensities in watts per meter squared for some familiar sounds.

### Sound Intensity and Sound Level | Physics

This means that sound waves with high frequencies have short periods, while those with low frequencies have long periods. For example, a sound wave with a frequency of 20 hertz would have a period of 0.05 second (i.e.,  $20 \text{ wavelengths/second} \times 0.05 \text{ second/wavelength} = 1$ ), while a sound wave of 20 kilohertz would have a period of 0.00005 second ( $20,000 \text{ wavelengths/second} \times 0.00005 \text{ second} \dots$

5.1 Channel Home Theater Systems . Home theater receivers are distinguished from two-channel (stereo receivers) by having additional amplifier channels to support movie theater sound (e.g. Dolby Digital 5.1, DTS 5.1) or multi-channel music (e.g. DVD-Audio, SACD discs). Your basic home theater system offers 5.1 channels of sound through five separate speakers and one subwoofer.

### Overview of 2.0, 2.1, 5.1, 6.1, 7.1 Channel Systems

With 7.1 virtual surround sound enabled, Windows will take 7.1 surround sound audio—in video games or movies, for example—and mix it to stereo sound, taking into account the position of the objects, before sending it to your headphones. 5.1 surround sound will also work.

### How "Windows Sonic" Spatial Sound Works

The "sound doctrine" by which Titus was bidden to regulate his teaching is an expression peculiar to these Pastoral Epistles (see Note on 1Timothy 1:10), and stands in clear contrast to the sickly, unhealthy teaching, fanciful and false, of the misleading teachers of Crete.

1.1k points · 7 years ago · edited 7 years ago The funny thing is this tiger actually had really bad teeth, which prevented it from hunting its preferred pray. It probably didn't even really like human that much, it just couldn't hunt the big game animals it would have liked due to messed up teeth (and thus an inability to kill them quickly).

### What is one fact that sounds like bullshit but is actually ...

QSound is the original name for a positional three-dimensional (3D) sound processing algorithm from QSound Labs that creates 3D audio effects from multiple monophonic sources and sums the outputs to two channels for presentation over regular stereo speakers. QSound was eventually re-dubbed "Q1" after the introduction of "Q2", a positional 3D algorithm for headphones.

### QSound - Wikipedia

5.1 surround sound ("five-point one") is the common name for six-channel surround sound audio systems. 5.1 is the most commonly used layout in home theatres. It uses five full bandwidth channels and one low-

frequency effects channel (the "point one"). Dolby Digital, Dolby Pro Logic II, DTS, SDDS, and THX are all common 5.1 systems. 5.1 is also the standard surround sound audio component of ...

**5.1 surround sound - Wikipedia**

What is Sound? Sound is a type of energy made by vibrations. When any object vibrates, it causes movement in the air particles. These particles bump into the particles close to them, which makes them vibrate too causing them to bump into more air particles.

Sound intensity is the amount of sound energy in a confined space. It is measured in decibels (dB). The decibel scale is logarithmic, which means that loudness is not directly proportional to sound intensity. Instead, the intensity of a sound grows very fast. This means that a sound at 20 dB is 10 times more intense than a sound at 10 dB.
