In MIG 7 Series v1.1, the bank selection page does not prevent the combination of High Range (HR) and High Performance (HP) banks in a memory interface. This means an interface could be generated where Data and Address/Control are located in both HR and HP banks. This combination would result in different I/O standards on the same memory interface bus.

Answers for Does it pivot as well

Browsing through DS187, there seem to be very few distinctions between HR and HP IOs, other than voltage range (and SelectIO choices). The most notable distinctions seem to be IODELAY jitter performance. Am I missing something? At 1.8V signaling, are there other performance differences between H...

Answer. Psalm 37:25 I was young and now I am old, yet I have never seen the righteous forsaken or their children begging bread. First, in Psalm 37, David reflects on whether the righteous or unrighteous will enjoy the Promised Land. He contrasts the righteous with the wicked. The Psalm instructs the righteous not to envy the seeming outward ...
