install/remove packages in an attempt to satisfy the build dependencies for a source package. ... It is possible that a system's dependency structure can be so corrupt as to require manual intervention.

apt-get(8) - Linux man page

apt-get provides a simple way to install packages from the command line. Unlike dpkg, apt-get does not understand .deb files, it works with the package's proper name and can only install .deb archives from a Source.. The first [1] thing that should be done before using apt-get is to fetch the package lists from the Sources so that it knows what packages are available.

Chapter 2. apt-get - Debian

Wiki

Today while installing VirtualBox in my Debian Linux (I want to install Ubuntu on my Debian). Accidentaly I have "re-installed" a package that was already part of the VitualBox combo. So that changed the flag from manual to auto installed in that package. This is what I have done: apt-get install virtualbox-dkms This what Debian replied to me:

Set auto or manually installed flag for packages in Ubuntu ...

```
sudo apt-get update sudo apt-get upgrade -y Install the dependencies.
sudo apt-get install python3 python3-dev python3-venv python3-pip
libffi-dev libssl-dev libjpeg-dev zlib1g-dev autoconf build-essential
libopenjp2-7 libtiff5 Add an account for Home Assistant Core called
homeassistant.
```

Manual installation on a Raspberry Pi - Home Assistant

```
sudo apt-get update; \ sudo apt-get
```

install -y apt-transport-https && \ sudo
apt-get update && \ sudo apt-get install
-y aspnetcore-runtime-5.0 Important. ...
Manual install. As an alternative to the
package managers, you can download
and manually install the SDK and
runtime.

Install .NET on Ubuntu - .NET | Microsoft Docs

To compile something, I needed the
zlib1g-dev package to be installed so I
launched an apt-get install zlib1g-dev..
apt-get informed me nicely that the
package was already auto-installed
because of an other package, and that it
understands that I want it installed
explicitly now : # apt-get install zlib1g-
dev zlib1g-dev is already the newest
version. zlib1g-dev set to manually
installed.

line interface

apt-get install zabbix-apache-conf
Distributions prior to Debian 10 (buster) / Ubuntu 18.04 (bionic) / Raspbian 10 (buster) do not provide PHP 7.2 or newer, which is required for Zabbix frontend 5.0.

2 Debian/Ubuntu [Zabbix Documentation 5.2]

APT is a vast project, whose original plans included a graphical interface. It is based on a library which contains the core application, and apt-get is the first front end — command-line based — which was developed within the project. apt is a second command-line based front end provided by APT which overcomes some design mistakes of apt-get.
