This may seem like an easy question for a physics type to answer: with what force does a rock that weighs 10N strike the ground if it is dropped from a rest position 10 m high? In fact, the question cannot be answered unless you know more. Discuss why this is so. The work that the rock does on the group is equal to its PE before being dropped, $mgh=100$ joules. The force of impact, however ...
