Dreamstime. To effectively pump blood throughout the body, CPR compressions must be hard. Generally, experts suggest individuals performing CPR aim for a depth of 5.5 centimeters (approximately two inches) for each compression. It takes roughly sixty pounds of force to compress the chest by this amount.

AS Level Biology Edexcel Revision Guide: Parsons, Richard ...

In order to perform correct compressions, you need to use the full weight of your upper body, not just the arms. Push straight down on the victim's chest, without bending your elbows, and try to compress the chest at least 5 cm. The compression rate should be 100 - 120 per minute (roughly 1.5 - 2 compressions a second).

Free CPR revision notes - CPR Test

This fantastic Head Start book is the ideal way to bridge the gap between GCSE and A-Level Biology. It recaps all the crucial topics you'll need to remember from GCSE, with crystal-clear study notes and examples, plus practice questions to test your understanding. We've also included introductions to some of the key topics you'll meet at A-Level. It's the perfect way to hit the ground
