Trichoscopy (hair and scalp dermoscopy) allows identification of hair and scalp diseases based on analysis of trichoscopy structures and patterns. Structures which may be visualized by trichoscopy include hair shafts, hair follicle openings, the perifollicular epidermis and cutaneous microvasculature.

Part C - Hair Dermoscopy

Hair and scalp dermoscopy, also known as trichoscopy, is a useful, noninvasive, adjunctive tool for the diagnosis of alopecia and other scalp and hair disorders. The utility of dermoscopy resides in improved visualization of abnormalities of follicular ostia, perifollicular skin, cutaneous blood vessels, and hair shafts.

(PDF) Dermoscopy in Hair Disorders - ResearchGate

Trichoscopy is a method of hair and scalp evaluation and is used for diagnosing hair and scalp diseases. The method is based on dermoscopy. In trichoscopy hair and scalp structures may be visualized at many-fold magnification. Currently magnifications ranging from 10-fold to 70-fold are most popular in research and clinical practice.

Trichoscopy - Wikipedia

Dermoscopy shows symmetrical peripheral hypopigmentation without scarring. The central naevus may be typical or atypical, fully developed or fading away. Globular and homogeneous patterns may be seen. Evolving halo naevi may be observed by dermoscopic monitoring to slowly disappear over months to several years.

Dermoscopy of benign melanocytic lesions | DermNet NZ

Dermoscopy is a useful noninvasive tool in the diagnosis of multiple cutaneous disorders, including those involving the hair and scalp. 33 Trichoscopy (hair dermoscopy) assists in the visualization and analysis of scalp and hair structures and patterns. 34 Besides contributing significantly to the clinical diagnosis, in CCCA it has been shown that dermoscopically selected biopsy sites yield higher diagnostic results on histology. 34

Dermatoscopy - an overview | ScienceDirect Topics

INTRODUCTION. Androgenetic alopecia (AGA) is the most common form of hair loss both in men and women, and is characterized by a progressive loss of hair diameter, length, and pigmentation 1. It is sometimes difficult to diagnose AGA clinically; thus, dermatologists are searching for new methods to facilitate the diagnosis.
