Register Transfer Level (RTL) is an abstraction for defining the digital portions of a design. It is the principle abstraction used for defining electronic systems today and often serves as the golden model in the design and verification flow. The RTL design is usually captured using a hardware description language (HDL) such as Verilog or VHDL.

Register Transfer Level (RTL) - Semiconductor Engineering

In digital circuit design, register-transfer level (RTL) is a design abstraction which models a synchronous digital circuit in terms of the flow of digital signals between hardware registers, and the logical operations performed on those signals.
