Aims: Psychiatric comorbidity and mental instability seem to be important unfavorable prognostic factors for long-term psychosocial adjustment in gender identity disorder (GID). However, psychiatric comorbidity in patients with GID has rarely been assessed.

Psychiatric comorbidity among patients with gender ...

Gender identity confusion is still believed to be a psychosexual disorder by some medical professionals, although research has begun to suggest that this issue may actually have a physical or biological cause. Many doctors and therapists have moved away from referring to gender issues as a disorder.

What Is a Psychosexual Disorder? (with pictures)

Gender dysphoria is the feeling of discomfort or distress that might occur in people whose gender identity differs from their sex assigned at birth or sex-related physical characteristics. Transgender and gender-nonconforming people might experience gender dysphoria at some point in their lives. But not everyone is affected.
