Gymnosporangium is a type of rust fungus. Rust fungi are biotrophic pathogens—they infect, grow, and sporulate in living plant tissue. Even though biotrophs require living host tissue for their growth and reproduction, they can be devastating pathogens by reducing the photosynthetic surface and increasing water loss in the host plant.

Comparative biomechanics is the application of biomechanics to non-human organisms, whether used to gain greater insights into humans (as in physical anthropology) or into the functions, ecology and adaptations of the organisms themselves. Common areas of investigation are Animal locomotion and feeding, as these have strong connections to the organism's fitness and impose high mechanical demands.

### **Biomechanics - Wikipedia**

At Budburst, we believe that the beauty of nature should be enjoyed by all of us. That's why we bring together researchers, educators, and community scientists to help answer important questions around the effects of climate change on plants and animals—and how we can mitigate those effects.
