DB Doc generation - Oracle SQL Developer [Book]

SQL Execution¶ Executing SQL statements is the primary way in which a Python application communicates with Oracle Database. Statements are executed using the methods `Cursor.execute()` or `Cursor.executemany()`. Statements include queries, Data Manipulation Language (DML), and Data Definition Language (DDL).

SQL Execution — cx_Oracle 8.1.0 documentation

Older version of Oracle had no “autoincrement” feature, SQLAlchemy relies upon sequences to produce these values. With the older Oracle versions, a sequence must always be explicitly specified to enable autoincrement. This is divergent with the majority of documentation examples which assume the usage of an autoincrement-capable database.
