the first edition in 1972. In 2009, R. K. Pathria (R.K.P.) and the publishers agreed it was time for a third edition to incorporate the important changes that had occurred in the field since the publication of the second edition and invited Paul B. Beale (P.D.B.) to join as coauthor. The two

CHAPTER 1. THERMODYNAMICS 4 By conservation of energy, $U(V_B, T_B) - U(V_A, T_A) = \Delta Q_{AB} - \Delta W_{AB}$ where ΔQ_{AB} is the non-mechanical energy change in going from A to B. We call ΔQ_{AB} the heat added to the system in going from A to B. If A and B are infinitesimally close, $dU = dQ - dW = dQ - PdV$ (*) where dU is an exact differential though dQ and dW are not. This is the first law of thermodynamics,
